

Alliance of the Ports of Canada, the Caribbean, Latin America and the United States

PORT-RELATED ECONOMIC STIMULUS PROJECTS

Investing in Public Port Authority infrastructure is an Investment in America. Public Port Authorities are poised and ready to undertake economic stimulus projects over the next two years that would create a quarter million new jobs, many in critically depressed regions, according to a recent survey of AAPA member ports. This includes more than 200 projects throughout the nation with a total construction value of \$8.5 billion. These needed infrastructure projects that are "shovel-ready" include water-side navigation projects, environmental improvements and road and rail connectors to ports. In addition to the creation of more than 275,000 new, well-paying jobs, these projects also would generate a significantly increased contribution to the nation's gross domestic product further helping to improve the nation's economic health.

For years investments in transportation infrastructure necessary for ports to function efficiently has been too little and too late. Even dedicated tax revenue has been shifted to other areas. For example, the Harbor Maintenance Tax produces annual revenue of about \$1.3 billion which compares to an annual need for dredging of roughly the same amount. However, under-funding for federal dredging at about \$800 million annually has produced a surplus collection of over \$4 billion while federal channels have filled with silt. According to the Army Corps of Engineers, full authorized depth of federal channels is available less than 32% of the time for the top 59 U.S. ports that handle over 10 million tons annually. The channel availability is much less for the smaller regional ports. These channels are our nation's economic lifeline to world markets and must be maintained.

The American Association of Port Authorities calls upon the President to champion these needed improvements, make them a reality and get American workers back on the job of rebuilding our nation's transportation infrastructure.

A list of needed projects identified by AAPA member Public Port Authorities is included in the attached file.

STATE	PORT	WATER	HIGHWAY	RAIL	COST	JOBS CREATED *
